Professional Summary

Software engineer specializing in **Generative AI, LLM applications, and agentic systems**, with an AI/NLP research background and experience working on enterprise LLM-powered assistants. At IQVIA, I focus on **prompt engineering, agent behavior optimization, domain alignment, and LLM evaluation**. Hands-on experience developing agentic applications using the **OpenAI Agents SDK, LangChain, LangGraph, RAG, and MCP**.

Professional Experience

Software Development Engineer, IQVIA – Dhaka, Bangladesh Feb 2024 – Present

- Contribute to enterprise **LLM-powered assistants for life-sciences analytics**, focusing on prompt engineering, agent behavior optimization, and LLM evaluation.
- Translate client feedback, business requirements, domain documentation, and data semantics into **system instructions, behavioral constraints, and agent configurations**.
- Design and iteratively refine prompts and agent instructions to improve **response accuracy, consistency, and adherence to domain requirements**.
- Analyze LLM failure cases and edge cases, identifying behavioral issues and implementing prompt- and configuration-level improvements.
- Work within **LangChain/LangGraph-based agent systems**, contributing to prompt configuration, behavior analysis, and evaluation, with **LangSmith** for agent observability and trace analysis.
- **Earlier in my tenure:** Developed and maintained cloud storage, document management, authentication, and security components using **.NET Core, C#, Angular, PostgreSQL, and AWS S3**.

Software Engineer I, Enosis Solutions – Dhaka, Bangladesh June 2023 – Jan 2024

- Developed and enhanced an e-learning web application using **ASP.NET Core, C#, Angular, SQL Server, and Entity Framework Core**.
- Delivered feature enhancements, resolved complex bugs, and improved performance, scalability, and system reliability.
- Collaborated with cross-functional teams to refine requirements and ensure timely delivery of business-critical releases.

Research Experience

Towards Equitable AI in Pathology: A Systematic Review of Fairness Challenges and Debiasing Methods in Histopathology Imaging March – May 2026

Collaborative Research Project | Manuscript in Preparation

- Contributed to a systematic review of fairness and bias in AI-based histopathology imaging following **PRISMA 2020**, synthesizing evidence from **78 studies**.
- Contributed to an **eight-category taxonomy of AI bias** and a proposed histopathology-specific fairness reporting framework for whole-slide image models.
- Investigated fairness evaluation, bias mitigation, and reproducibility challenges in pathology AI.
- **Co-authors:** Dr. Raktim Kumar Mondol, Shahana Akter

Automated Classification of Code Review Feedback Feb 2022 – Apr 2023

Undergraduate Research | BUET

- Researched deep learning-based classification of code review comments using **CodeBERT embeddings** and **AST / change-based metrics**, achieving significantly higher accuracy over baseline models.
- Supervisor: Dr. Anindya Iqbal

Publication

Towards Automated Classification of Code Review Feedback to Support Analytics ESEM 2023

Asif Kamal Turzo, Fahim Faysal, **Ovi Poddar**, Anindya Iqbal, Amiangshu Bosu

Selected GenAI & Agentic AI Projects

Agentic Chatbot – LangGraph Multi-Use AI Assistant

[GitHub](#)

- Built a stateful LangGraph workflow with specialized nodes for conversational reasoning, web search, and news aggregation, integrating Tavily, Groq LLMs, and Streamlit.

Weather Agent – Multi-Agent MCP System

[GitHub](#)

- Developed a multi-agent MCP system using LangGraph and Gemini, integrating custom Weather and Calculator MCP servers implemented in Go and Python.

InfoScope AI – RAG & News Intelligence

[GitHub](#) | [YouTube](#)

- Built an end-to-end RAG pipeline with LangChain, FAISS, and OpenAI; Streamlit UI for context-aware, citation-backed Q&A over indexed articles and uploaded text.

Blog-Agentic – Multi-Agent Content Generation

[GitHub](#)

- Designed a multi-stage agentic pipeline with specialized agents for topic generation, web research, outline planning, and article drafting, coordinated by a central workflow controller.

Additional Software Projects: [Compass](#) (MERN) · [Social Shout](#) (Django) · [ATMEGA32 Alarm Clock](#) (Embedded)

LLM Engineering & Agentic AI — Hands-on Development

LLM Engineering – Core AI Engineer Track | 2026 [GitHub](#)

Hands-on implementation across LLM applications, Hugging Face/Transformers, RAG, vector databases, fine-tuning with LoRA/QLoRA, deployment, and agentic AI.

Additional hands-on labs: OpenAI Agents SDK, LangChain/LangGraph, CrewAI, MCP, tool integration, multi-agent orchestration, and custom MCP servers ([GitHub](#)).

Technical Skills

Generative AI & LLM Engineering: LLM Application Development, Prompt Engineering, LLM Evaluation, RAG, Tool Calling, Multi-Agent Systems, Agent Orchestration, Embeddings, Vector Databases, Fine-tuning, PEFT, LoRA/QLoRA

Frameworks & AI Tools: OpenAI Agents SDK, OpenAI APIs, LangChain, LangGraph, LangSmith, MCP, Hugging Face, Transformers, FAISS

Machine Learning: NLP, Machine Learning, Deep Learning, Scikit-learn, TensorFlow, NumPy, Pandas

Software Engineering: Python, C#, C++, Java, .NET Core/ASP.NET, Angular, Django, Entity Framework Core, SQL

Cloud & Infrastructure: AWS, PostgreSQL, MongoDB, Docker, Git, Linux

Education

Bangladesh University of Engineering & Technology (BUET)

B.Sc. in Computer Science and Engineering

March 2018 – May 2023

CGPA: 3.61/4.00

Awards & Achievements

- **IQVIA Silver Award** — recognized for exceeding expectations, taking ownership in the absence of a technical lead, and supporting delivery and system stability.
- **BUET Dean's List** — recognized for academic performance (CGPA 3.75+ across all Level-2 semesters).
- **2,500+ competitive programming problems solved** on [Codeforces](#), [LeetCode](#), and other platforms.
